

# Cyber Security Maturity Plan

## Concerns You Might Have?

- The evolving cyber related threats facing your information, systems, and operations is a real and serious issue that requires a modern security approach and program.
- These threats can cause irreparable damage to your operations and reputation along with major financial costs and effort to repair the damage.
- Many organizations struggle to grasp where to start when planning and implementing their organizational cyber security programs.
- Most organizations can not afford the time and cost to do everything that is required to implement an effective cyber security program.
- Internal IT teams often do not have the time and security expertise to develop a program to effectively protect your organization.

## How Castellan Can Help!

- Castellan has developed professional services to support your organizational security program in a manageable and cost-effective manner.
- A tailored set of bundled services to help clients build their programs in an incremental and prioritized manner over a period of time.
- An ongoing cyber security management, vulnerability management, offensive security protection service to build, implement and help manage a client's cyber security program.
- The service starts with a risk assessment and road map identifying security gaps, vulnerabilities and a multi-year plan to best support your organization's business and security objectives.
- Recommended measures will be implemented by Castellan security experts, working closely with the client's IT team in a prioritized manner respecting operating budgets and other priorities.
- Each year, Castellan will review the upcoming year's plans and budget to implement a refined and targeted statement of work.
