

Monthly Vulnerability Scanning

Concerns You Might Have?

- The evolving cyber related threats facing your information, systems, and operations is a real and serious issue that requires modern security tools and expertise to monitor your IT systems and data.
- These threats can cause irreparable damage to your operations and reputation along with tens of thousands in costs to repair this damage.
- Does your organization know what ongoing vulnerabilities exist in your IT systems that can be exploited by cyber threats and bad actors?

How Castellan Can Help!

- Castellan has developed a professional service using state of the art security scanning technology to provide enhanced visibility and understanding of cyber security vulnerabilities impacting client's data and systems.
- Using advanced vulnerability scanning technology and internal security expertise, Castellan will conduct a detailed monthly scan of your systems and applications to identify and interpret security vulnerabilities that exist putting your data and operations at risk.
- This monthly service can be an effective part of a broader organizational cyber security program to protect your organization's data and systems.
- Scanning and reporting will be coordinated by Castellan security experts, working closely with the client's IT team.
- The scanning service can be delivered for as low as \$499/month depending on the client's size, complexity and the # of assets to be scanned.

Outputs / Deliverables

- Monthly scan of client Internet facing assets using industry leading tool(s).
- Monthly report prepared by Castellan security experts identifying vulnerabilities.
- Remediation recommendations to fix vulnerabilities.
- Security performance metrics and tracking.
